

OsdagBridge Software Testing & Issue Reporting

Objective

The objective was to test the OsdagBridge short-span steel girder bridge module and verify the complete workflow from GUI input to final design report generation.

Environment

Operating System: macOS

Application: OsdagBridge

Testing Type: Functional Testing

Testing Workflow

1. Launch OsdagBridge application.
2. Enter bridge design parameters.
3. Execute bridge design calculation.
4. Verify generated structural outputs.
5. Verify 3D visualization.
6. Generate final PDF design report.

Test Results

Test Case	Result
Application Launch	PASS
Bridge Input Entry	PASS
Design Calculation	PASS
Structural Output Generation	PASS
3D Visualization	PASS
PDF Report Generation	PASS

Evidence

Screenshots are attached showing: - Application launch - Bridge input configuration - 3D visualization - Design results - Generated report

Issues Observed

During initial setup, compatibility and dependency issues were encountered. After resolving environment issues, the complete OsdagBridge workflow executed successfully.

Test Evidence Mapping

Test Case 1: Application Launch

Evidence: 01_application_launch.png

Result: OsdagBridge GUI launched successfully.

Test Case 2: Input Verification

Evidence: 02_input_parameters.png

Result: Bridge geometry and design parameters were entered successfully.

Test Case 3: 3D Model Generation

Evidence: 03_3D_Bridge_Model_Generation.png

Result: 3D bridge model was generated successfully.

Test Case 4: Design Analysis

Evidence: 04_Design_Analysis_Result.png

Result: Structural design calculations completed successfully.

Test Case 5: Output Dashboard

Evidence: 05_Output_Analysis_Dashboard.png

Result: Generated outputs and design results were verified.

Generated Report

The final OsdagBridge PDF design report was generated successfully.

File: OsdagBridge_Design_Report.pdf

Conclusion

The OsdagBridge bridge design workflow was successfully tested from input configuration to final PDF report generation.
